

ABSTRACT

Disclosed is a pharmaceutical composition, comprising a combination of a dose of 6-MNA or a pharmaceutically acceptable salt thereof and a dose of oxycodone or a pharmaceutically acceptable salt thereof, said combination in an amount sufficient to provide an analgesic effect in a human patient. Also disclosed is a method of effectively treating pain in humans or other mammals, comprising administering to the patient a combination of a dose of 6-MNA or a pharmaceutically acceptable salt thereof and a dose of oxycodone or a pharmaceutically acceptable salt thereof such that the dosing interval of the 6-MNA overlaps with the dosing interval of the oxycodone, said combination in an amount sufficient to provide an analgesic effect in a human patient.
